Remarks

1. Each row is a separate credit subsidy cohort as required by the PWS. Policy year is calculated as fiscal years from beg_amort_dt.

2. Survivorship is as of the beginning of each fiscal year, with the exception of policy year 1, where it includes all originations.

3. Miscellaneous terminations, i.e. non-claim, non-prepay terminations, have been removed entirely from populations considered here.

4. Maturing loans are removed from survivorship at time of original scheduled maturity.

5. Terminations past scheduled maturity date are included in the last column of the product-level finger tables.

6. Eight 15-year loans in the forecast sample that IDB shows as active past policy year 16 are treated as maturing in policy year

Remarks

- Each row is a separate credit subsidy cohort as required by the PWS. Policy year is calculated as fiscal years from beg_amort_dt.
- Survivorship is as of the beginning of each fiscal year, with the exception of policy year 1, where it includes all originations.
- Miscellaneous terminations, i.e. non-claim, non-prepay terminations, have been removed entirely from populations considered here.
- Maturing loans are removed from survivorship at time of original scheduled maturity.
- Terminations past scheduled maturity date are included in the last column of the product-level finger tables.
- Eight 15-year loans in the forecast sample that IDB shows as active past policy year 16 are treated as maturing in policy year 16 for purposes of the finger tables. NPV impacts of term extensions are discussed separately.

Remarks

- Each row is a separate credit subsidy cohort as required by the PWS. Policy year is calculated as fiscal years from beg_amort_dt.
- Survivorship is as of the beginning of each fiscal year, with the exception of policy year 1, where it includes all originations.
- Miscellaneous terminations, i.e. non-claim, non-prepay terminations, have been removed entirely from populations considered here.
- Maturing loans are removed from survivorship at time of original scheduled maturity.
- Terminations past scheduled maturity date are included in the last column of the product-level finger tables.
- Eight 15-year loans in the forecast sample that IDB shows as active past policy year 16 are treated as maturing in policy year 16 for purposes of the finger tables. NPV impacts of term extensions are discussed separately.

Remarks

- Each row is a separate credit subsidy cohort as required by the FWS. Policy year is calculated as fiscal years from beg_amort_dt.
- Survivorship is as of the beginning of each fiscal year, with the exception of policy year 1, where it includes all originations.
- Miscellaneous terminations, i.e. non-claim, non-prepay terminations, have been removed entirely from populations considered here.
- Maturing loans are removed from survivorship at time of original scheduled maturity.
- Terminations past scheduled maturity date are included in the last column of the product-level finger tables.
- Sight 15-year loans in the forecast sample that IDB shows as active past policy year 16 are treated as maturing in policy year 16 for purposes of the finger tables. NPV impacts of term extensions are discussed separately.
